

# Helmet Brackets for Wolf Mini and Midi Torches

## Product Overview

---

The M-660 and M-680 Helmet Mount kits allow Wolf's Mini and Midi torches to be mounted on Centurion helmets or helmets with a Euro 30 slot.

The strong and versatile M-660 and M-680 helmet brackets are designed to allow the Wolf M-20, M-40 and M-60 Mini torches, and the M-85 Midi torch, to be attached to Centurion helmets or helmets with a Euro 30 slot.

Allowing hands free use in the Hazardous Area, use of the bracket with a Mini or Midi torch means you are not restricted to the typical flood beam pattern of most head torches - you have the flexibility to choose the right beam pattern and light output for the specific application. When attached to the helmet, the M-60, with its tight spot beam, is particularly useful when walking or gaining hands free access through restricted entrances. If illumination is needed for a more prolonged period, the 10 hour battery duration of the M-40 would be the ideal choice. Where high levels of light are required, the M-85, with its tight spot and a wide angle fringe beam, can easily be attached to the helmet.

Once attached, the torch can be easily adjusted both laterally and vertically to allow efficient, hands free work. The torch can be simply and quickly released from the mount when required, allowing the torch to be used both as a standard and head torch - a cost effective solution for many applications.

### M-660

For use with Wolf M-20, M-40 & M-60 Mini Torches.

### M-680

For use with the M-85 Midi Torch.
